## L'ecatombe di Stato Pensieri Maggio 2020 - Vol 9

a cura di Guido Contessa

### The Last Famous Words (May 28)

The Prime Minister, who still has to keep his promises 3 months ago, croaks that the EU must send "aid" NOW!

### Hoax lockdown (24 May)

The tough lockdown in Italy began on March 10, 2020. Let's pretend that all the dead until March 30 had been infected before. By the evening of March 28, 10023 had died. To date, 32,785 have died (and it is not over). We are the second European country by number of deaths. This means that the lockdown phase resulted in twice the deaths compared to the previous phase. STAY HOME resulted in 22,762 deaths.

And do they pass it off as a winning solution?

### Coups d'état (24 May)

"A coup d'état consists in the overthrow - by one or more people, popular or national elites, independently or with the direct or indirect support of an institutional body such as the armed forces - in an illegal, blatant and often violent, of established power, in order to cause regime change." (Wikipedia).

In Italy we have two under our eyes:

1. that of the guild of magistrates against governments
2. that of the Head of Government against Parliament

### The bureaucracy trick (May 21)

Europe, Italy and the Regions never say no to those who ask for funds and projects to be implemented. They say yes to everyone to obtain consent. Then it comes to moving from decision to practice. And here bureaucracy comes in handy. To get the promised funds you need:

- have expensive consultants and accountants (better if even some lawyers)
- fill in indecipherable forms and attach 5-6 kilos of documentation
- obtain the approval of 10-15 municipal, regional, national and community offices
- participate in a rigged race whose criteria are discretionary
- rely on a bank that perhaps, with high interests, anticipates the expenses of the first two years
- after 3 years from the application, approval may also arrive, but only a part of the funds

Who is listed as guilty of this scam? Bureaucracy

### Health dictatorship (May 19)

When politicians say they "follow science real" they lie and use science as an alibi.

1. medicine has never been a science, but an art
2. as we have seen well There is no science but the sciences and there is no claim that it cannot be denied
3. politicians have decided to use medical friends as a scapegoat

### Contradictions of the regime (May 19)

Article 85 Consolidated text of public safety laws (TULPS) NEVER REPEALED

It is forbidden to appear masked in a public place.

The offender is punished with an administrative sanction, from 10 euros (20,000 lire) to 103 euros (200,000).

It is forbidden to use the mask in theaters and other places open to the public, except in periods and with the observance of the conditions that can be established by the local public safety authority with a special poster. The offender and those who, invited, do not take off their masks, are punished with an administrative sanction from 10 euros (20,000 lire) to 103 euros (200,000).

### October terrorism (18 May)

Many threaten a viral wave in October, even worse than the previous one. The recipe is "we will close everything again". In the almost 500 pages of the "Relaunch" decree there is no trace of the millions of masks, thousands of cylinders and hundreds of health workers ready for a new emergency. There is no trace even of the millions of swabs and related reagents that could be used. Finally, there is no trace of a reform of territorial health. In the process, the state will find itself again unprepared and therefore we will be forced to make other house arrests.

### Faults? (May 16)

If employers are responsible for any contagions of their workers, we cannot fail to inquire the primary, the health directors, the ASL Presidents, the Health Assessors and the Government for sending the health workers and infecting and dying without protection.

Government memo (May 15)

Have you understood that the 100,000 small and medium-sized enterprises that will close will NEVER pay taxes again?

Memo for service operators (May 15)

Have you understood that you must make your services fail because the state has not been and is unable to provide an adequate health service?

Do not open that door!!! (May 15)

The poor shopkeepers were caught by the siren "REOPENING!". Now they are discovering that they will be able to open with delusional rules, and they are beginning to fear that a terrified clientele will be little inclined to dinner. On the other hand, if they are officially active, they will lose any possibility of subsidy.

Disinfection? (May 14)

Hurry up, to say: "I have sanitized" .... You will not believe that the State can trust your word! There are too many "cunning outlaws" who say it but don't do it; they do this using fresh water; they do, but one day and two no.

So here is the predictable Implementing Decree of the April Prime Ministerial Decree, which came out in May, and which everyone will receive in August:

1. if the operator reserves the activity, he must first activate a certified register where he can take into account day by day the products and quantities used, as well as the "sanitation manager" in charge;
2. obviously the used products must have the CE mark: those without, are not effective
3. if the manager is public and relies on a company, he must make a contract
4. if the manager is private, he must choose from the companies registered in a special Provincial Register, which will be activated after the October harvest
5. the commissioned company must issue a "sanitization occurred" certification to the customer after each service
6. Both the product register and the sanitization certificates that have taken place must be kept at least 5 years at the disposal of GDF, Urban police, Carabinieri, and Leather heads ... who will be able to make monthly inspections.

Any violation of the aforementioned rules will be punished with a 3,000 euro fine, and ten streaks in the public square.

Fantastic! (May 13)

We regularize thousands of carers, domestic workers and baby sitters. Everyone to argue why they are foreigners. No one remembers that, without prior withdrawals and swabs, we are sending thousands of unwitting greasers into the homes who will kill the survivors of the first wave.

India-Italy: 3 to 0 (12 May)

In India 73,901 infected and 2,408 dead

In Italy 221216 infected and 30911 dead

Political fantasy (10 May)

New DPCM:

- it is allowed to bathe in the sea but standing on one leg
- sunbathing on the beach is allowed, but only dressed in astronaut suits and helmets
- it is allowed to buy an ice cream cone, but to eat at home or to lick walking backwards
- it is allowed to go to dinner between spouses but you eat one at a time ... the other waits outside
- it is allowed to go in tandem ... but alone

PS: the rules for August will be given in October

To each his disdain (May 8)

We are facing a sanitary massacre and a white coup. Masks are not found and tampons are scarce. The economy is killed by incapable politicians and administrators ..... But many are bitterly beating those who walk less than a meter.

The terror of risk (7 May)

What risk do I run by pressing the button on the 4th floor? What risk do I run if I caress my dog ??who in the park rubbed himself with his fiancée, who in turn was caressed by the owner I don't know? What is the risk of touching the banknotes?

Nobody dreams of asking what risk you run by crossing the road, driving your car, flying, or dusting the bookshelves.

Sick inside (7 May)

Here is the proof of the mental illness that has hit Italy. We must not give money to entrepreneurs because the state has damaged them, because the state must support businesses, because unemployment must be fought. We have to give the money because otherwise the mafia does!

Pathetic comparisons (May 6)

Those who have studied say that Italy is ill but also the USA, which already have 30 million unemployed, 70,000 deaths out of 382 million inhabitants. We remember that:

1. the percentage of 70,000 out of 382,000,000 is 0.02% (USA), 30,000 out of 60,000,000 is 0.05 (ITA)
2. the percentage of 30,000,000 out of 382,000,000 is 8% (USA), in Italy we are well over 10%
3. the US does not have the fabulous public health and healthcare system, which Italians pay dearly.

Amateur massacres and professional massacres (6 May)

1. National Bank of Agriculture of Milan, 1969, 17 dead and 88 injured.
2. 1974, Piazza della Loggia in Brescia, 8 dead and a hundred injured.
3. 1974, Italicus train, 12 dead and one hundred and five injured
4. Bologna Central Station, 1980, 85 dead and over 200 wounded.
5. Massacre bus Acqualonga Viaduct, 2013, 40 dead

6. Ponte Morandi 2018, 43 dead and 566 displaced.

In total, these or many other massacres with less than 7 deaths did not cause more than 400 deaths. Amateur stuff. So we call the highly professional Codiv disaster in Italy, which has managed to cause about 30,000 deaths, 215,000 infected and over 10 million new poor.

Fantaguerra (6 May)

Croatia attacked Friuli by land, sea and air, razing hundreds of buildings and killing 802 civilians. The government and the Italian army declare that they were not prepared and were taken by surprise.

Public opinion calls for the resignation of the government, the army and intelligence leaders (it calls itself this); and demands war damages from Croatia.

Unconscious greasers (May 5)

We want to know how many deceased socio-health workers have been used before as unwitting plotters

Blow of Sato in 4 moves (May 5)

1. Facilitate the spread of the virus
2. Spread terror
3. Suspend democratic rights (paralysis of Parliament, checkpoints, complaints, fines, etc.)
4. Feed the misery

DASPO (May 5)

The state massacre comes from far away.

Never again a single vote to all the parties that have governed the State and Regions in the last 10 years

You must understand (May 5)

He says: "The state, health and regions were not prepared for such a serious pandemic!"

He replies: "This is the tip for which you will be condemned"

The future that kills time (May 4)

The government's preferred verb is the future. We have done nothing and we do: we are only doing, we will do. The patient is dead and the task forces in the next room are studying the cure that will come.

Football complaints (May 4)

For three months they have been softening us with the complaints of football. You play, you don't play. How many employees are there for the football circus? 500? 1000? Buffer everyone, play only the negatives and leave the others on the bench, like when they break the meniscus.

Cohabitants (May 3)

I am happy: from tomorrow I can meet my partner on the balcony. For two months we have been on the far sides of the studio.

The black tragicomedy of the app (1 May)

A good subject downloads the magical app, after of course having equipped himself at his expense with an adequate mobile phone, with its subscription. After two days he receives the alarm "You have entered the virus contact". A couple of sleepless days go by: watch out for every symptom. A little cough with fever arrives. Call the appropriate number and explain the fact. Those who answer suggest that you contact your general practitioner. Six calls to the GP, too busy to answer. A mournful voice responds to the seventh call, saying: "Dr. Brambilla is deceased, the replacement is busy for the next 7 days, but if it is urgent I will send you a volunteer doctoral student". Well.

A handsome young man arrives in a t-shirt and is greeted with: "But you don't have a mask !?". Answer: "They were finished, but I have a nice scarf. You don't have a mask either." "No, I haven't left the house for 3 days and neither does my partner go out, because she's afraid of infecting someone". Then the temperature of both is checked.

He has a fever, she doesn't. The volunteer releases a prescription and records the quarantine, "How can I buy medicine if I have to be in quarantine?" Send the lady, she has no symptoms so she can go out. "After a week he is worse, he is breathing badly. She has some symptoms. New call, but the previous doctoral student has been moved. "I'm sending you an experienced nurse."

A clumsy guy comes up and asks a few questions, measures the fever. "Aren't you going to do the quick blood test?" "No, the Region is deciding which one to use." Aren't you going to swab us? ". Swabs are made only in the hospital. "Then send us to the hospital. Answer" You only have symptoms: it is not serious enough; the lady could only have one influence. "" I often miss my breath: don't you give me a cylinder? " . "And for the masks?" "You have to take them home too, but we don't supply them. You have to buy them in the pharmacy ..... No problem, the lady is not in quarantine and can go out. Unfortunately I can't tell her if they will have and how much they will cost: the Government is deciding how to calm the price. "

Ten days later the porter opens the door and finds two corpses, not good looking. Call 113 and immediately afterwards you will receive a message from the mythical App: "You have entered the contact with the virus". The same message is received by the pharmacist where the lady bought the masks.
